LightSquared Subsidiary LLC Request for Modification of Its Authority for an Ancillary
Terrestrial Component

FCC File Number: SAT-MOD-20101118-00239

Dear Federal Communications Commission:

Wouldn't it be great if tech industry startups looking to test out new business practices could do so without being forced to spend the billions of dollars required to build their own nationwide wireless network?

LightSquared's business model would provide just that opportunity, so I urge the FCC to approve LightSquared's application for a modification of its authority for an Ancillary Terrestrial Component. Simply put, LightSquared will provide additional competition in the mobile broadband market by opening up space for new service providers.

In addition, LightSquared's satellite service will also become a vital component of a countrywide emergency back up for our ground-based technology.

I encourage you to support LightSquared's request and thus, entry into the market.

Respectfully submitted,

David E. Hasseltine
